

# Pilot Car Module

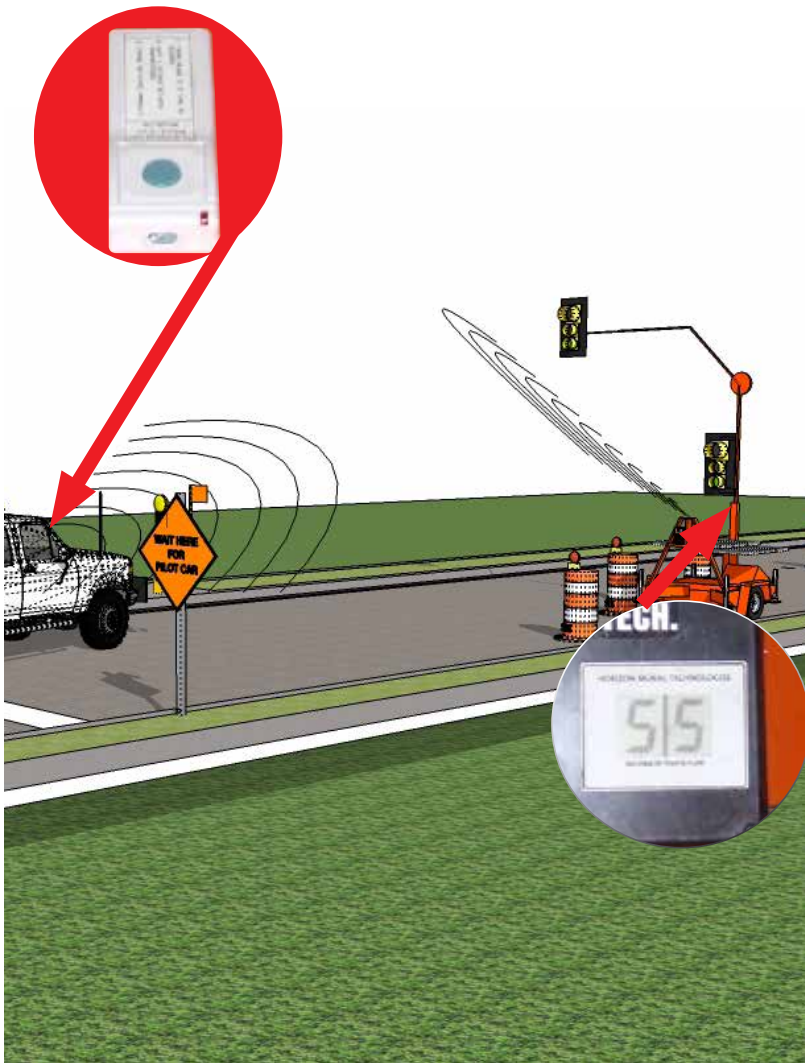

COMPONENT OPTIONS

## INCREASES SAFETY FOR PILOT CAR OPERATOR OR FLAGGER

The Pilot Car / Flagger Module allows a pilot car driver or flagger to operate a Horizon Signal System remotely using a hand held transmitter. The use of Horizon Signal Systems equipped with our Pilot Car / Flagger Module increases safety for both the worker and the motorist. The Pilot Car/ Flagger Module features two modes of operation, "timed" and "flagged" to allow for simple and efficient traffic control.

## How it Works

Three selectable green time options are available and can be selected by the pilot car operator via wireless remote. The wireless remote allows the pilot car operator to select green time in 15 second increments based on traffic volume.
