

# SQ3TS® Upgrades

## VIDEO MONITORING

Allows users to monitor work zone activities via live stream video, accessible from any internet-connected device. 360-degree rotation, as well as zoom and tilt controls are included.

## LEFT TURN ARROW

MUTCD-Compliant turn arrows can be added to the SQ3TS for dedicated turning lanes. This addition allows for safe traffic flow through intersections during construction and peak traffic times.

## ARM SYSTEM

Digitally manage and monitor your PTS fleet with access to signal timing data and event logs, and also configure email and SMS text message alerts to be delivered based on signal activity.

## WAIT TIME DISPLAY

Provides drivers with a visual display of the amount of time remaining before the next green indication. The system is ideal for long work zones with high Red Clearance intervals and potentially long wait times.

## VIDEO DETECTION

Allows for true presence vehicle detection via the creation of customized detection zones. This non-intrusive detection system is easily installed and does not require a PC for configuration.

## WIRELESS KNOCKDOWN

Allows a Horizon SQ3TS signal to be wirelessly operated by a standard street corner traffic signal controller. The system is ideal for pole knockdowns, or temporary traffic pattern reconfigurations.
