

Wait Time Display

Increase Driver Awareness in Work Zones

Displays real-time signal operation messages

The Wait Time Display provides drivers with a visual readout of the amount of time remaining before the next green indication. The system is ideal for long work zones with high Red Clearance times, as it informs drivers that they can expect a longer than average wait.

Wait times can be displayed either as an estimated value — “Up to 5 Mins” — or as a real-time countdown. In addition, custom messages can be programmed for flashing scenarios, telling drivers to seek an alternate route around the flashing signal.

The Wait Time Display is available in a compact 18" x 28" size, or a large 24" x 60" version, and can also be upgraded to allow for bluetooth connectivity.

Available in two sizes:
18" x 28" or 24" x 60"

IP65 Weatherproof Rating

Up to six screens per
