

SQ3TS® Upgrades

VIDEO MONITORING

Allows users to monitor work zone activities via live stream video, accessible from any internet-connected device. 360-degree rotation, as well as zoom and tilt controls are included.

LEFT TURN ARROW

MUTCD-Compliant turn arrows can be added to the SQ3TS for dedicated turning lanes. This addition allows for safe traffic flow through intersections during construction and peak traffic times.

HORIZON SIGNAL PLUS™

Monitor your portable traffic signals from virtually anywhere with Horizon Signal Plus. View real-time system status, receive instant alerts, track equipment locations, review performance history, and manage your fleet

WAIT TIME DISPLAY

Provides drivers with a visual display of the amount of time remaining before the next green indication. The system is ideal for long work zones with high Red Clearance intervals and potentially long wait times.

VIDEO DETECTION

Allows for true presence vehicle detection via the creation of customized detection zones. This non-intrusive detection system is easily installed and does not require a PC for configuration.

WIRELESS KNOCKDOWN

Allows a Horizon SQ3TS signal to be wirelessly operated by a standard street corner traffic signal controller. The system is ideal for pole knockdowns, or temporary traffic pattern reconfigurations.

SQ3TS® Upgrades

BATTERY WATERING KIT

Easily maintain battery water levels on your SQ3TS trailer. This easy-to-install system eliminates the need for manual watering of individual batteries, saving time and reducing the risk of over or underfilling.

15-FOOT EXTENSION ARM

Increases horizontal reach of the overhead mast arm on an SQ3TS portable signal trailer. This upgrade is ideal for multi-lane applications, or scenarios where the PTS is positioned off the shoulder.

WIRELESS REMOTE

The most convenient method of manual signal control! The built-in vibration function works as a confirmation of each button press, and the signals can be switched back to automatic mode with just one tap.

PILOT CAR SYSTEM

Allows a Pilot Car driver or flagger to operate a Horizon Signal System remotely via a handheld transmitter. The simple 4-key remote makes controlling traffic in pilot car applications easy.

HORIZON SIGNAL PLUS™

Monitor your portable traffic signals in real time, receive instant alerts, track equipment locations, and remotely manage signal settings through one secure, cloud-based platform.

EMERGENCY VEHICLE PRE-EMPTION

Allows emergency vehicles faster response times in time-critical situations when navigating through a work zone. The system provides the earliest safe green indication in the direction of an approaching emergency vehicle.
